WORK EXPERIENCE

Java Developer

Cognixia USA

2023 / Remote

- Developed a Full suite Spring Boot REST API, implementing Spring Security, Hibernate, JPA, and Mockito Test Suite
- Collaborative Development – used Git CLI and GitHub under AGILE Methodology with teammates to develop a Full Stack Application
- Database Proficiency - in RDBMS MySQL and deployed Cloud Databases on AWS RDS. Understanding of Systems Management, Normalization, Complex Queries, and API Integrations.

PROJECTS

LingoPOP Language Learning API

- A language learning application that uses Bootstrap, Python, CSS, Javascript, and MongoDB. Features include: Login/Register, add and delete flashcards, add quizzes, login security.

Portfolio 1.0 Website

- A modern portfolio website built with next.js, framer motion, tailwind css, and react.
- Sanity.io was used for the backend.

Social Media backend REST API

- A backend for a hypothetical social media app, where users' accounts and messages are managed.
- The application functions as a micro-blogging or messaging app.
- Processes actions like logins, registrations, message creations, message updates, and message deletions.
